Summary

Hi, I'm an undergraduate student with a broad interest in artificial intelligence. My current research focuses on several key areas: multimodal models capable of handling diverse inputs and outputs (including video, image, text, audio, and action), fact-checking using large language and vision-language models, virtual try-on systems, and adapting instruction-following capabilities of English-based large language models to Korean and other languages.

Education

Soongsil University

Mar. 2020 – Feb 2026

Bachelor of Science in Artificial Intelligence

Seoul, South Korea

- includes a 2-year mandatory alternative military service at MAUM.AI
- GPA 4.19 / 4.5, currently 2nd/100

Research Experience

MAUM.AI

Dec 2024 – Current

Senior AI Research Scientist

Pangyo, South Korea

- Developing a Korean Vision-Language Model (VLM) and building surveillance VLMs for real-time video anomaly detection on edge devices (e.g., Jetson NX, Hailo-10H).
- Working on WoRV team [\[LINK\]](#) to build a End-to-End Vision-Language Action model to drive or act like human. Collaborating with MIR Lab, led by Prof. Youngjae Yu.

AI Research Scientist

Apr 2023 – Nov 2024

- Improved the quality of RAG by enhancing the retriever. By training it with a high-quality dataset and selecting the best models, the retriever achieved a maximum 68% score improvement(Recall@K) compared to its previous performance.
- Optimized STF(Speech-To-Face) model by using ONNX and TensorRT, reducing the 1-second video generation time from 1.6 seconds to 0.7 seconds. This enhancement enables real-time streaming in real-world applications.
- Worked on transferring instruction-following capabilities from English to Korean in open-source large language models. This work aims to facilitate the development of high-quality Korean language models at a low cost.
- Lead the creation of a Korean VLM and a comprehensive benchmarking framework for evaluating Korean VLMs. We open-source the dataset and model, in addition to developing a proprietary version for on-premises deployment.
- Contributed to the development of vision-language action models under team WoRV, focused on enabling commonsense reasoning-based VLM navigation using only visual perception.
- Experienced with training large language models(up to 70B), using deepspeed for multi-node training. While each node comprises 8 NVIDIA H100 80GB GPUs, eight DGX H100 systems interconnected with NVSwitch are used for training.

HUMANE Lab

June 2024 – Current

Undergraduate research student advised by Kunwoo Park

Soongsil University, South Korea

- Work for building automated fact-checking for both using only text and multi-modal

Replica AI

March 2025 – April 2025

ML Engineer, independent contractor

Remote, United State

- Work for virtual-try-on(VITON) fashiontech

MISys Lab

June 2021 – August 2022

Undergraduate research student advised by Kanghee Kim

Soongsil University, South Korea

- Studying C++ programming, developing motor control systems using EtherCAT, and building an electric go-kart.

EnCLAP: Combining Neural Audio Codec and Audio-Text Joint Embedding for Automated Audio Captioning Jaeyeon Kim, Jaeyoon Jung , Jinjoo Lee, Sang Hoon Woo <i>IEEE International Conference on Acoustics, Speech and Signal Processing (ICASSP), 2024</i>	<i>2nd author</i>

Challenge

AVeriTeC shared task hosted by the eight FEVER workshop at ACL 2025 2nd Place <ul style="list-style-type: none"> We enhance our previous year's fact-checking pipeline using new retrieval method and quantization 	May 2025
AVeriTeC shared task hosted by the seventh FEVER workshop at EMNLP 2024 2nd Place <ul style="list-style-type: none"> We build our fact-checking pipeline with open LLMs, specifically llama in AVeriTeC fact-checking dataset. Since our pipeline was developed with open LLMs, our system was selected as a baseline for the eight workshop. 	August 2024
Detection and Classification of Acoustic Scenes and Events 2024 Challenge 2nd Place <ul style="list-style-type: none"> Participated in Task 6: Automated Audio Captioning, and Task 8: Language-Based Audio Retrieval. 	June 2024

Awards

NeurIPS 2024 - Open World Agent Workshop Outstanding Paper Award	December 2024
LG Display Product Quality Classification (LG Aimers 2) 1st Place <ul style="list-style-type: none"> Implemented a robust regressor and fitted classifier, then ensembled them using custom hard voting to create a generalized model. Because our model focused on avoiding overfitting, we achieved a public score of 10, but secured first place in the final ranking, while the scores of other public top 10 models fluctuated. 	March 2023
Samsung AI Challenge (3D Metrology) 1st Place <ul style="list-style-type: none"> Experimented the diverse method to transfer simulated SEM images to real ones for predict depth maps. Since only simulated SEM images were paired with depth maps, we utilized CycleGAN to perform unpaired domain transfer from simulated SEM images to real SEM images. improved the quality of predicting depth maps by employing cosine similarity-based KNN to identify relevant depth maps for reference during the generation stage. 	October 2022
LG Innotek Radar Performance Prediction (LG Aimers 1) 2nd Place <ul style="list-style-type: none"> Conducted an analysis of tabluar data from a radar building factory, using both domain knowledge and SHAP values. Throughout this process, derived variables were generated using domain knowledge, and irrelevant variables were removed based on SHAP values, resulting in a more informative dataset. 	September 2022

<ul style="list-style-type: none"> Trained the boosting ensemble model based on refined dataset with stratified kfold method since the data distribution is imbalanced. 	
2023 SWUniv AI Challenge 4th Prize	November 2023
2022 Soongsil University AI contest 2nd Prize	November 2022
2022 SWUniv AI Challenge 7th Place	November 2022
2022 Naver AI RUSH Reach the final	July – August 2022
2022 Dankook University AI Challenge 7th Place	July 2022
2021 Soongsil University AI contest participation Prize	November 2021
